

WORKPLACE EXCELLENCE PLATFORM

Cloud-based **real-time** modelling of work practice change

Organisations everywhere are scrambling for growth in an increasingly complex and volatile business atmosphere.

As they seek a trajectory for success, what must business leaders do to help them successfully manage uncertainty and complexity, and ultimately foster growth?

The answer lies in making precise investments designed to drive cost efficiency through productivity and

agility, pre-empt scarcity, and seek targeted innovative approaches to work practices.

But, optimising agility needs a clear understanding of the way your organisation interacts. Business support functional leaders (HR, IT, and Property) must work in unison to deliver an enduring change in work practice performance—something that can often be notoriously difficult to achieve.

Our **Workplace Excellence Platform** taps into vast analytic, KPI and metric repositories to model your change investment scenarios.

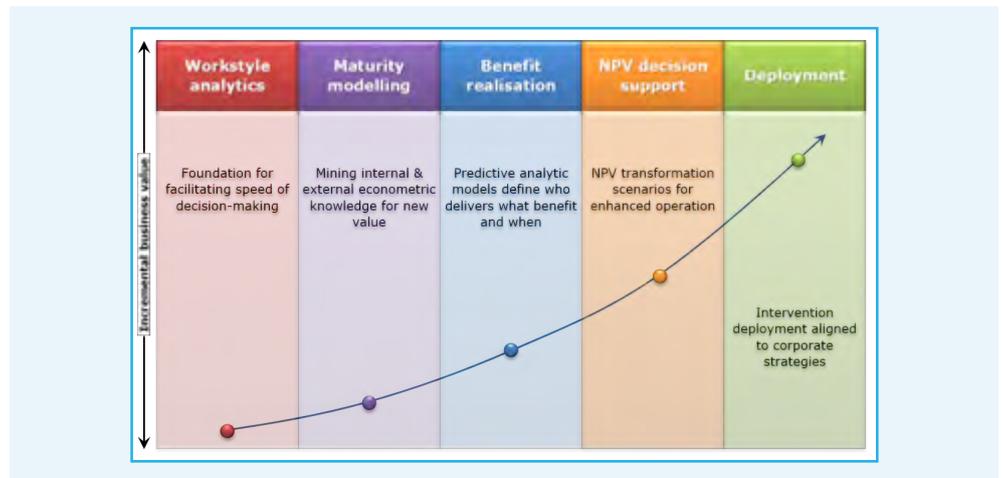

And then see the impact of change initiatives in **realtime**.

- Real-time analytic workplace modelling
- Continuous Net Present Value projections of work practice change
- Dynamically view the impact of reprioritising resources
- Assess impact of real estate consolidations
- Automatically assign and track KPI's to owners
- Comprehensive business intelligence reporting and project planning

Industry-leading workplace analytics transferred to a cloud platform

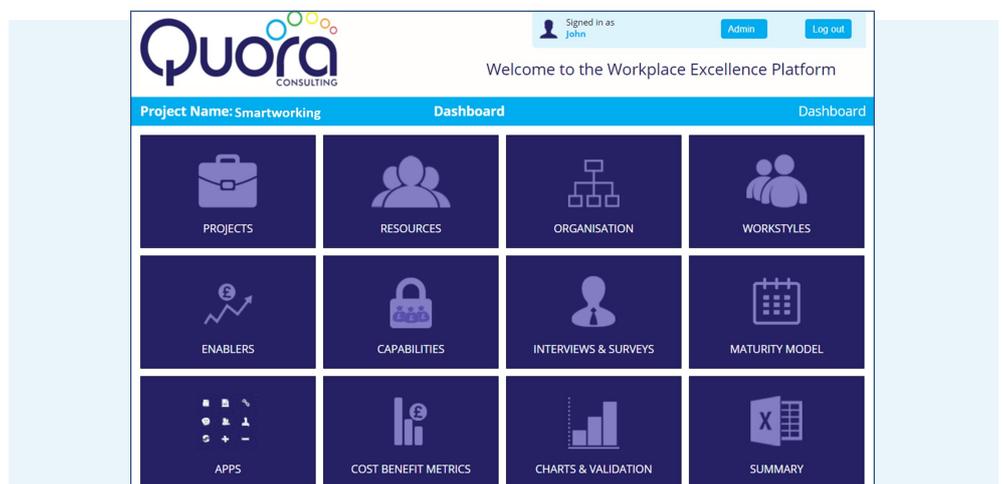

Our precision Workplace Excellence Platform eliminates uncertainties of creating operational agility and delivers;

- Dynamic cost control
- Increased staff effectiveness
- Enhanced corporate competitiveness

For over 17 years, we have worked with more than 350 organisations using our industry-leading analytic capability to deliver precision Net Present Value scenarios for controlling costs, increasing staff effectiveness (i.e. productivity), and enhancing corporate competitiveness—all delivered inside just a few weeks.

Now, following a two-year development, we have transferred our analytics, capability maturity modelling, metric and KPI repositories to our unique **Workplace Excellence Platform®**—a cloud-based capability for delivering work practice change scenarios in **real-time**.

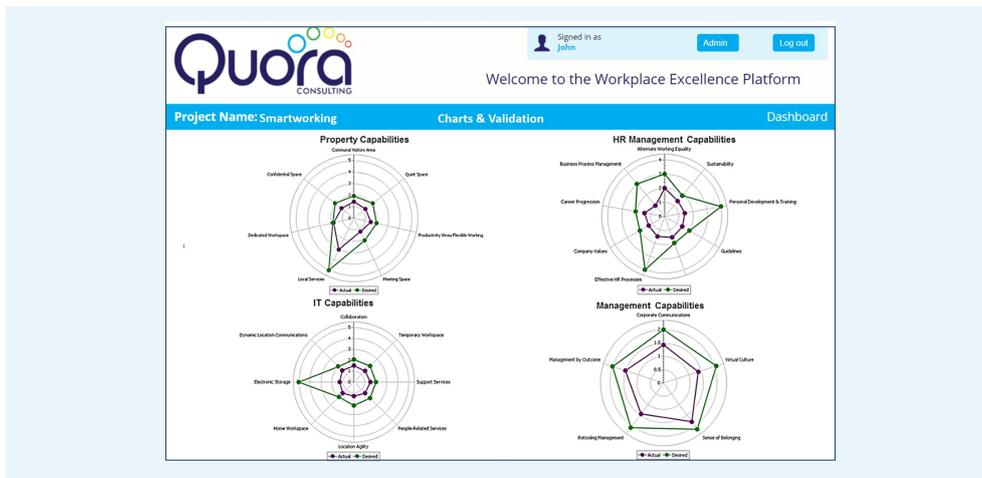

The Platform draws on our vast repositories of HR, IT, and Property KPI's, and integrates both your specific metrics together with those of your key vendors to create your unique dashboard of work practice change.

For the first time you can eliminate the investment uncertainties of creating

operational agility and model the impact of reprioritising resources, juggling lease breaks, deploying technologies, changing HR practices, and much, much more—and instantly see the Net Present Value cost control impacts and timelines for your organisation.

A true step-change in delivering workplace and work practice change

Take the guesswork and uncertainty out of workplace change

Our Platform shows whether seizing that lease break opportunity will deliver the actual financial gains you are hoping for? Or what HR practice change it takes to get enterprise-wide adoption of collaborative conferencing? Or see the precise NPV gains from creating an agile workplace? And much more.

Instantly see performance gains

and resource impacts. A new location, product or service is being considered — see the implications and immediately generate executive reports, presentations and project plans.

Real-time workspace utilisation assessment

A separate module is available for the Platform that employs automated integrations to measure actual workspace use in **real-time**.

Unique sensor technologies

A unique sensor capability provides real-time value by unlocking the data you need to make smart decisions. See how real-time sensor data helps you optimise asset performance, tune productivity, and improve quality of life.

19mm x 19mm x 2mm sensors with a 15 year *install & forget* battery life and a 100 metre broadcast range allows you to constantly collect workplace data, gain insights into operations and make data-backed decisions in **real time**.

○ See precisely whether that lease-break makes economic sense?

○ What HR practice changes are needed to realise enterprise-wide web conferencing adoption?

○ Does introducing a new technology deliver the anticipated gains — what's the resource impact?

○ What is the current optimum workspace density — what should it be in the future?

○ What productivity gains can be achieved and how to measure them?

○ Much, much more...

Workplace Excellence Platform options are;

- **Automated real-time workspace utilisation module**
- **One-off workplace analytic and/or continuous ongoing dynamic workplace modelling.**
- **Consultant-led and/or self-assessment engagement.**

Put simply, our Workplace Excellence Platform helps you focus your limited resources on critical investment decisions.

New to Quora — find out more

Quora is a unique 100-person business consultancy, whose forte is inspiring business leaders to transform workplaces and work practices through precision analytics, real-time workplace modelling and substantial research.

Our analytics help organisations focus limited resources on critical decisions. We provide frontline leaders with Net Present Value clarity to ensure effective investments are made in such areas as:- attracting and retaining talent, optimising space configuration

and location, deploying technology innovations, enhancing staff creativity and productivity, and making fluent social, ethical, & environmental decisions.

Our work combines an array of organisational analysis models, statistical frameworks, methodologies and benefit realisation planning, integrating internal and external data to predict future workplace behaviour, events, demands, and optimise forward investments.
